

Waterproof Fire Starting Tender

In a pan of "warm" water, place a jar of Vaseline (aka Petroleum Jelly) until Vaseline becomes clear. Do not boil the water.

Dip cotton balls (make sure they are not synthetic) in Vaseline and drain on newspaper.

Store cotton balls in a plastic bottle (Pill bottles work fine).

They are ready for use.

Don't leave home without them when you are engaged in outdoor activities.

Tear cotton balls in half and light the fibers with spark from flint.
